

Presentation Rubric

The presentation (10% of final grade) is graded 5% by peers and 5% by instructor/TAs, both using this rubric (20 points total). Scores are submitted via Microsoft Forms during presentations on November 19 or November 26, 2025, with peer scores normalized across both days for fairness.

The presentation should showcase the project's progress by **November 17**, including all core technical requirements and a clear plan for advanced features, even if the advanced features are not fully implemented by November 17.

Criteria

1 Clarity of Presentation (0-4 Points)

- **4:** Clearly explains the project's purpose, creative design, and objectives with a logical flow; easy to follow for peers and instructor/TAs.
- **2:** Explanation is mostly clear but may lack some detail, focus, or organization.
- **1:** Explanation is unclear, confusing, or lacks a logical structure.
- **0:** No clear explanation of the project's purpose or design.

2 Core Technical Requirements (0-12 Points)

The presentation must showcase the implementation of all core technical requirements (except deployment, which only requires a plan), functioning in a local environment (e.g., Expo Go). TypeScript usage should be briefly indicated in slides or verbally.

Checklist (6 items)

Check each item the team demonstrates clearly during the presentation:

- ☐ **React Native + Expo + TypeScript:** App runs in Expo Go; key components/hooks use TypeScript.
- ☐ **Navigation:** Functional navigation (Expo Router or React Navigation), including data passing.
- ☐ **State Management + Persistence:** Context / useReducer / Redux + Async Storage shown in demo.
- ☐ **Notifications:** At least one working local notification.
- ☐ **Backend Integration:** Fetching live external data (not static JSON) with loading/error handling.
- ☐ **Deployment Plan:** A clear outline of the EAS Build deployment plan.

Scoring Guidelines

- **12 Points**
 - All **6** boxes checked
 - All features work smoothly in demo

- TS usage clearly shown or explained
- No major bugs or missing elements
- **9 Points**
 - **4–5** boxes checked
 - One requirement may be partially implemented or buggy
 - TypeScript usage indicated but not very clearly
 - Deployment plan included but light on details
- **6 Points**
 - **2–3** boxes checked
 - Multiple missing or non-functional requirements
 - Noticeable demo issues (crashes, broken flows)
 - TS usage minimal or unclear
 - Deployment plan vague
- **3 Points**
 - **1** box checked, or several attempted but none fully functional
 - Demo unclear or severely incomplete
 - No meaningful TS explanation
 - Deployment plan missing or unclear
- **0 Points**
 - **0** boxes checked
 - No functioning core requirements demonstrated

3 Advanced Features and Future Plan (0-4 Points)

- **4:** Clearly describes at least two planned advanced features with a simplified demo or mockup (if not fully implemented); explains how they will be completed by December 7, 2025, with a feasible plan.
- **2:** Describes planned advanced features but lacks clarity, detail, or a feasible completion plan; demo/mockup is incomplete or unclear.
- **1:** Mentions advanced features but provides minimal detail, no demo/mockup, or an unrealistic plan.
- **0:** No mention of advanced features or plan for completion.

Submission

Submit scores for each team (except your own) during or immediately after their presentation via the digital form on Microsoft Forms. Ensure your evaluation is fair and based on the demonstrated progress and clarity of the presentation.
