

Quiz 1

Date: September 3, 2025

The correct answer for each question is **in bold**.

Question 1

What is the primary role of JSX in a React component?

- To manage component state and side effects
- **To define the structure and appearance of the UI using HTML-like syntax**
- To handle user events like clicks and typing
- To compile JavaScript into native code for mobile apps

Question 2

What does the `useEffect` hook do in a React component?

- Defines reusable UI elements with props
- Manages local state within a component
- Maps JavaScript components to native platform views
- **Runs side effects like updating the DOM or fetching data**

Question 3

Given the following React Native code from the lecture:

```
import { View, Button } from "react-native";

const App = () => {
  return (
    <View style={{ flex: 1, justifyContent: "center", alignItems: "center" }}>
      <Button title="Click me" onPress={() => alert("Hello!")} />
    </View>
  );
};
```

What does the `onPress` prop in the `<Button>` component do?

- Updates the component's state to track the number of clicks
- **Triggers a native alert dialog when the button is pressed**

- Styles the button to align it in the center of the view
- Compiles the button into a platform-specific native view

Question 4

What is the primary benefit of using Expo Go for testing React Native apps?

- **It allows instant app previews on real devices without building native code**
- It compiles native code into `.ipa` and `.apk` files for distribution
- It provides access to advanced TypeScript debugging tools
- It automatically optimizes the app for both iOS and Android performance

Question 5

What is a key advantage of using React Native over traditional native app development?

- It requires separate codebases for iOS and Android
- It uses platform-specific languages like Swift and Kotlin
- **It allows ~90% code reuse across iOS and Android with one JavaScript codebase**
- It eliminates the need for device sensors like GPS or camera
